Part 1

Conjecture – you need to state what you conjecture for your argument is going to be. This can be mathematically based but it is not a requirement. This is the basis for your argument.

Facts – what are five facts that you can list to support your conjecture?

Proof – can you give any proof that can be used as evidence that is: circumstantial, statistical based, expert testimony, authority, or internet proof?

Example: Can you give any examples to support your claim? (2-3)

Conclusion: wrap up the argument

You need to create an outline for the above steps.

Then write up a one page paper for your argument.
